

ABSTRACT OF THE DISCLOSURE

A closing device for sliding portions of pieces of furniture, such as drawers and the like, consisting of a container fastened to the fixed or to the sliding portion of the piece of furniture wherein there are housed a mechanical energy accumulator and an actuation member that is sliding into a guide of the container, and of a pulling member, respectively fastened to the other side of the piece of furniture, which interacts with the actuation member. The actuation member is directly or indirectly slowed in its movement by a deceleration device based on the use of high-viscosity greases.
